PROFILE

Information Science graduate who builds working data and AI products rather than just studying them. Most recently, I designed and shipped a **personal-finance analytics platform** that turns raw transaction data into structured insight — querying and aggregating a **multi-table PostgreSQL database** for the numbers, then having an **AI model** explain them in plain language rather than calculate them, so the output stays trustworthy. That instinct — start with the **data**, design the product around what the **user** actually needs, and make the result explainable — is what draws me to LSEG's **Data & Analytics** graduate programme. I bring practical **SQL and Python** experience, hands-on **Generative AI** exposure, and a genuine, actively-developing interest in **financial markets**.

SKILLS

Data & Analytics: **SQL (PostgreSQL, MySQL) — querying, filtering, and aggregating multi-table datasets; Python**

AI: **Generative AI (Gemini API) integration, AI-output design and evaluation** (structured data → AI explanation, with a rule-based fallback)

Product / Application Development: **React.js, Node.js, Express.js, REST APIs**, JWT Authentication

Programming: Java, JavaScript, Python, Kotlin, SQL, C (basic)

Engineering Foundations: OOP, Data Structures & Algorithms, DBMS, Operating Systems, SDLC, Agile

Tools: Git, GitHub, Postman, Vercel, Render

PROJECTS

AI Finance Autopilot — Personal Finance Data & Insights Platform (2-person team) Live demo *2026*

- Owned **authentication, the analytics dashboard, AI insights, backend integration, rate limiting, and testing**; a teammate built signup, budgets, and transaction management — together turning raw transaction data into a usable financial picture for the user.
- Modeled and **queried a multi-table PostgreSQL schema** (transactions, categories, budgets, users), **filtering and aggregating** data to calculate income, expenses, savings rate, and category-level spending trends behind the dashboard.
- Designed the AI layer around trust: the backend **computes every figure from the database**; Gemini only turns that structured summary into a plain-language insight — the AI explains the data rather than inventing it — with a **rule-based fallback** if the model is unavailable.
- Validated the product with Jest/Supertest integration tests and a k6 load test (10 virtual users, 30 s): ~9.7 req/sec, ~13 ms avg / 12.6 ms p95, 0% errors (controlled local test).

Conflict Avoidance & Landslide Alert System (ESP32/IoT, KSCST-funded) — Team Lead: led a student team integrating 5 sensors into a real-time embedded alert system; sponsored by KSCST (IISc Bengaluru) and selected for the State-Level Exhibition — broader evidence of taking a project from problem to working solution.

EXPERIENCE

Android App Development Intern (Generative AI), MindMatrix ***INTERNSHIP*** *Feb 2026 – May 2026*

- Built features for a **customer-facing** Android application, integrating REST APIs and Generative AI functionality — direct, if small-scale, experience building a product around a **user's** needs.
- Debugged issues and tested functionality in an Agile team with stand-ups and sprint reviews, **collaborating** with senior engineers to translate requirements into working features.

Web Development Intern, Oasis Infobyte (Remote) ***INTERNSHIP*** *Feb 2024 – Mar 2024*

- Built responsive web pages to defined requirements and deadlines, collaborating on **user-facing** design and development decisions.

EDUCATION

B.E. in Information Science & Engineering, JSS Academy of Technical Education, Bengaluru 2022 – 2026
CGPA: 7.86 | Coursework: Data Structures & Algorithms, DBMS, Operating Systems, Computer Networks
Pre-University Course (PCMC), Sri Chaitanya PU College, Bengaluru — 92.87%

CERTIFICATIONS

Career Essentials in Generative AI — Microsoft and LinkedIn

Business Analysis Foundations: Business Process Modeling
